Attention and Warning Symbols
You must be aware of safety when you install and use this system. This guide provides various procedures. If you do some of these procedures carelessly, you could injure or kill yourself or damage equipment or property. Some other procedures require special attention.

Marks a procedure where the following may happen:
• Personal injury or death may occur.
• Equipment or property may be damaged.

Marks the following issues:
• Important operation or maintenance instructions follow.
• Special attention is required.

Important Safety Instructions
You must keep safety in mind when you install and use the DISH 1000.2. Refer to the safety instructions in the installation instructions that came with your system. In this guide, the following notes tell you when you need to pay special attention:
1. Read these instructions.
2. Keep these instructions.
3. Heed all warnings.
4. Follow all instructions.

Keep the following in mind when you install the DISH 1000.2:
• Before you drill any holes in your building, make sure there are no wires or pipes near the holes.
• Install the equipment in accordance with the local building and electrical codes. If you aren’t sure, call a licensed building inspector or electrician for help.
• Never install the satellite dish near power lines.
• Don’t install the satellite dish on composite materials such as strand, chip, fiber, or particle board unless the fastener attaches securely to a wall stud, rafter, or other foundation material beneath the surface.

Note to Satellite TV System Installer: This reminder is provided to call the satellite TV system installer’s attention to Article 820-40 of the National Electrical Code (NEC) that provides guidelines for proper grounding and, in particular, specifies that the cable ground shall be connected to the grounding system of the building as close to the point of cable entry as practical.
Installation Instructions

**Attention!** These installation instructions are intended for use by qualified professional technicians due to the complexity of the installation and compliance to national/local building and electrical codes.

**Overview**

These instructions guide you through the installation of a DISH Network DISH 1000.2 antenna, which consists of a reflector assembly and a DISH Pro Plus 1000.2 LNBF. The DISH 1000.2 is capable of receiving digital television signals from three DBS satellite locations: 110°W, 119°W, and 129°W. These instructions cover wall mounting only. For other mounting options (for example, pole mounting, or non-penetrating mounting), see the Retailer Care Site at retailer.echostar.com.

**Installation Considerations**

While all DISH Network satellite receivers can be connected to the DISH 1000.2, the following models may not detect and will not support the 129°W location: 1000, 2000, 3000, 4000, 5000, JVC-DVHS (IRR), and the DishPlayer 7100/7200.

This installation supports Legacy receivers, but there must be at least one DISH Pro or DISH Pro Plus receiver in the installation. Legacy receivers are receivers which do not have the DISH Pro or DISH Pro Plus logo (shown below).

![DISH Logo](image)

**About the System**

The DISH Pro Plus 1000.2 LNBF provides reception from the 110°W, 119°W, and 129°W orbital locations, and provides an LNBF input port to receive programming from another satellite. The following LNBF types can be connected to the LNBF input port: DISH Pro Single, DISH Pro Dual, or DISH Network bandstacked LNBFs.

The LNBF assembly supports connection of up to three satellite receivers in any of the following combinations:

- Single-cable connection to DISH Pro Plus (dual-tuner) receivers, when each input is used with a DISH Pro Plus Separator.
- Single-cable connection to DISH Pro receivers.
- Single-cable connection to a Legacy receiver provided that a DISH Pro or DISH Pro Plus receiver is also connected and powered at all times. No DISH Pro Adapter is required.
Quick Installation Instructions

Figure 1. DISH 1000.2 Antenna Installation Overview

1. Find Azimuth/Elevation/Skew angles for your location (instructions on page 3 and tables on page 10).
2. Find a location for the dish antenna with a clear line of sight and a sturdy mounting surface (page 3, step 1).
3. Mount the mast, making sure it is absolutely vertical (page 3, steps 2 and 3).
4. Assemble the dish antenna, setting the skew and elevation angles in the process. Use additional skew bolts for skew angles greater than 110 or less than 70 (page 3, steps 4-6).
5. Mount the dish antenna on the mast and point the dish to the azimuth angle (page 4, step 7).
6. Run cables between the dish antenna and the receiver(s), leaving a service loop around the Mast Clamp (page 5, step 1).
7. Using a peaking meter attached to the DPP 1000.2 LNBF PORT 1, peak the dish on 119°W using transponder 11 or higher for maximum strength. Tighten all bolts (see Table 1) and re-confirm maximum signal (page 5, steps 2-5).
   **Note:** The 1000.2 Three-LNBF Bracket with three DP Dual (or DP Single) LNBFs can be used in place of the Integrated Adapter Bracket and DPP 1000.2 LNBF.
8. Connect the receiver cable(s) to the DPP 1000.2 LNBF PORT 1 (and PORT 2 and PORT 3, as necessary) (page 6, step 6) and receiver. Some restrictions apply when connecting Legacy receivers. See page 7.
9. Run Check Switch test and confirm 110°W, 119°W, and 129°W reception (page 6, steps 7-9).
10. Take a software download, if you didn’t already (page 7, step 10).
12. Install additional receiver(s), if necessary (page 7, step 12).
13. If applicable, connect a second satellite dish to the DPP 1000.2 LNBF's LNB In port (page 8, steps 1-4).
Locating the Dish Antenna

Use the Angles Tables starting on page 10 to find the azimuth, elevation, and skew angles using the ZIP code from your location. Write the angles in the space provided below.

<table>
<thead>
<tr>
<th>Azimuth</th>
<th>Elevation</th>
<th>Skew</th>
</tr>
</thead>
</table>

Using these azimuth and elevation angles, find a mounting location for the satellite dish where it can be pointed towards the satellites located at these angles. Use a compass and the azimuth angle to find the direction along the horizon that the dish should be pointed. Then use the elevation angle to find out how high the satellites are in the sky from your location. Make sure nothing blocks the line of sight between the dish and the satellites. Make sure this line of sight will not be blocked by future growth of nearby trees or other foliage. Also make sure your mounting location provides sufficient clearance to rotate the reflector as needed to point toward the satellites.

Assembling and Mounting the Dish

Follow these instructions to assemble the satellite dish, mount it, and point it in the direction of the satellites.

1. Using the azimuth and elevation angles, find a location for the satellite dish where it can be pointed towards the satellites located at these angles. Make sure nothing blocks the line of sight between the dish and the satellites.

2. Mount the mast to a solid surface so that the dish antenna cannot move or be bumped out of alignment. Keep in mind that physical and environmental conditions can block your satellite dish’s ability to receive a clear satellite signal. Never mount to a tree or a public utility pole.

3. Align the top part of the mast so that it is absolutely vertical. If the top part of the mast is off vertical by only a few degrees, it will be difficult or maybe even impossible for you to find the satellites. Take at least two readings with a level, on the upper mast, that are 90 degrees apart from one another (see Figure 1).

4. Loosen both skew bolts and set the skew by rotating the dish mounting bracket to align the mark with the required angle on the skew scale which you wrote above. Tighten the skew bolts securely. See Table 1 for the required torque values. **After the skew is set, do not try to fine-tune the skew angle when aiming the dish.**

Note: If your skew angle is at the extreme ends of the scale (greater than 110 or less than 70), insert nuts and bolts from the hardware pack into the additional skew holes. These additional skew holes provide greater stability to the dish at these extreme angles. See Figure 2.
Assemble the satellite dish as shown in Figure 1, except do not attach the LNBF at this time.

**Note:** The Three-LNBF Bracket and three DP Dual (or DP Single) LNBFs can be used instead of the Integrated Adapter Bracket and the DPP 1000.2 LNBF. The Three-LNBF Bracket is not interchangeable with the W-Bracket from the DISH 1000.

Set the elevation by loosening then tilting the dish mounting bracket to align the edge with the required angle on the elevation scale. Tighten the elevation bolts snugly to prevent movement.

Slide the dish assembly down onto the mast. Make sure the pivot bolt rests on the top of the mast and that the mast is fully inserted into the tab. Turn the dish assembly so that it points in the general direction of the satellites, using the azimuth angle you wrote on page 3.
Installing the Receivers

Use the steps below while referring to Figure 1.

Run RG-6 coaxial cables from the DISH 1000.2 antenna to the receiver location(s) using the following cable requirements. Grounding, other devices, and in-home cabling must also meet these requirements.

- **RG-6 coaxial cable rated for at least 950 to 2150 MHz must be used in this installation. Do not use existing cables such as RG-59 as it may cause signal loss. Also, be sure that any outdoor connections are made using waterproof F-connectors rated for 2150 MHz or greater.**

- **The length of the RG-6 cable from any receiver and farthest dish connected in the system must not be longer than:**
  - 200 feet for DISH Pro or DISH Pro Plus receivers.
  - 100 feet for Legacy receivers.

- **The cable length between the DISH 1000.2 and a connected compatible LNBF must be 80 feet or less.**

  The cable’s center conductor must not extend past the rim of the F-connector more than the thickness of a nickel.

  Tighten all outdoor cable connections up to the torque values recommended by the manufacturer to ensure seal against moisture. Damage caused by over-tightening is not covered by the limited warranty. Tighten all indoor coaxial cable connections to the receiver only by hand. If you use a wrench, you may over-tighten the connections and damage your equipment.

Connect a temporary cable to a peaking meter. Thread the other end of the cable through the LNBF arm and bracket. Connect the temporary cable to **PORT 1** of the DPP 1000.2 LNBF and attach the LNBF to the bracket with two screws. If using the Three-LNBF bracket and three DP Dual (or DP Single) LNBFs, connect the temporary cable from the peaking meter to the 119°W (center) LNBF. Attach the LNBFs to the bracket using the included screws.

**Note:** If the peaking meter does not produce at least 600 mA to power the DPP 1000.2 LNBF, connect **PORT 2** of the LNBF to the **SATELLITE IN** port of a powered receiver, or temporarily connect the Three-LNBF bracket with a Dual or Single LNBF for peaking on 119°W.

Peak the dish for the strongest possible signal on the 119°W satellite signal using the azimuth and elevation settings you wrote on page 3. Do not adjust the skew.

**Note:** If you cannot find the 119°W signal, try adjusting the elevation up or down one or two degrees. Ensure you are peaking the dish using transponder 11 or higher.

With the peaking meter still connected, tighten the mast clamp and elevation bolts using the torque values listed in Table 1 on page 6. Re-confirm signal strength after tightening the bolts.
Table 1: Torque Values

<table>
<thead>
<tr>
<th>Location</th>
<th>Torque Value (ft-lbs unless otherwise noted)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mast pivot through bolt (ensure no mast deformation occurs during tightening)</td>
<td>24 in-lbs</td>
</tr>
<tr>
<td>Mast locking nuts</td>
<td>12</td>
</tr>
<tr>
<td>Reflector mounting bolts</td>
<td>6</td>
</tr>
<tr>
<td>Clamp locking bolts</td>
<td>6</td>
</tr>
<tr>
<td>Clamp pivot through bolt (ensure no mast deformation occurs during tightening)</td>
<td>24 in-lbs</td>
</tr>

<td>12</td>
</tr>
<tr>
<td>Skew adjustment locking nuts</td>
<td>12</td>
</tr>
<tr>
<td>LNB and bracket attachment hardware</td>
<td>Handtight</td>
</tr>
</tbody>
</table>

Remove the temporary cable used for peaking the dish. Thread the cable(s) from the receiver(s) through the LNBF arm and bracket. Connect these cables to PORT 1, PORT 2 and PORT 3, as applicable.

**Note**: If using the Three-LNBF Bracket with DP Dual (or DP Single) LNBFs, refer to the section *Connecting to a Switch* on page 9 and the switch’s installation instructions for additional details.

Connect a cable from DPP 1000.2 LNBF PORT 1 (or PORT 2 or PORT 3) to a DISH Pro or DISH Pro Plus (dual-tuner) satellite receiver’s SATELLITE IN connection(s). If a Legacy receiver is present, it should be installed last.

To connect DISH Pro Plus (dual-tuner) receivers with a single cable, install a DISH Pro Plus Separator as follows:

a. Connect a cable from the DPP 1000.2 LNBF output (PORT 1, PORT 2, or PORT 3) to the DISH Pro Plus Separator Input.

b. Connect cables between the receiver’s SATELLITE IN 1 and SATELLITE IN 2 to SATELLITE IN 1 and SATELLITE IN 2 respectively on the DISH Pro Plus Separator.

You must use a DISH Pro Plus Separator in a single-cable/dual-tuner receiver installation. A splitter or other device will not work in this configuration.

Tighten all indoor coaxial cable connections to the receiver only by hand. If you use a wrench, you may over-tighten the connections and damage your equipment.

Connect the receiver(s) to the TV(s) and display the Point Dish screen (if not shown, for most receivers, press MENU-6-1-1 on the remote control).
From the **Point Dish** screen, run **Check Switch**. On Legacy receiver models 2800, 3900, 4900, and 6000, select the **SuperDISH Installation-3Sat** option prior to running the Check Switch test. On all other Legacy models, select **Test**. When the Check Switch procedure finishes, you should see an Installation Summary screen similar to the ones shown below. Make sure the summary screen shows reception from the 119°W, 110°W, and 129°W satellites on all available satellite tuners. Also confirm the LNBF is correctly identified as a **DPP 1000.2** (factory software on some models may identify this LNBF as a **DPP Twin** or **DPP Triple**, which is OK). Legacy receivers will identify the LNBF as **SW64**.

**Note:** On some models, you might not see signal from 129°W until after you take a software download and run a Check Switch in steps 10 and 11. Legacy receiver models 1000, 2000, 3000, 4000, 5000, 7100, 7200, and JVC-DVHS (IRR) may not detect and will not support the 129°W location.

**Note:** If you are using the Three-LNBF Bracket, your Installation Summary screen will vary depending on the connected switch. Make sure the summary screen shows reception from the 119°W, 110°W, and 129°W satellites on all available satellite tuners.

Exit the **Installation Summary** screen to display the **Point Dish/Signal** screen. Make sure the signal strength bar is green and locked for the 119°W, 110°W, and 129°W satellites.

**Note:** You might not see signal from 129°W until after you take a software download and run a Check Switch in steps 10 and 11.

Exit the **Point Dish/Signal** screen and follow the on-screen instructions for taking a receiver software download. Do not disturb the receiver during the process of downloading software. If exiting the **Point Dish** screen does not start the download process, turn off the receiver for at least 20 minutes (on most receivers) to allow the receiver to take a software download.

Run **Check Switch** again and confirm reception for all three satellites on all available satellite tuners. Your Installation Summary screen should be similar to the ones shown above in step 8. Some software on some models may identify the DPP 1000.2 LNBF as a **DPP 1K.2**. This identification is OK.

If installing an additional receiver, follow steps 6-11. Make sure the summary screen shows reception from the 110°W, 119°W, and 129°W satellites. Keep in mind that a DISH Pro or DISH Pro Plus receiver must remain connected and powered at all times to power the DPP 1000.2 LNBF.
Connecting a Second Satellite Dish

After completing the previous sections to install the DISH 1000.2, use these instructions to add a fourth satellite location from a second dish to the DISH 1000.2. The LNBF from the second dish must be a DISH Pro Single or DISH Pro Dual looking at a DBS satellite location, or a DISH Network bandstacked LNBF.

1. Install and peak the second dish antenna using a peaking meter and the instructions that came with that dish antenna. Skip any steps regarding taking a receiver software upgrade since this was done in the previous section of the DISH 1000.2 Installation Instructions.

2. Run cable from the second dish antenna location to the DISH 1000.2, referring to the cable requirements stated in step 1 on page 5.

3. Connect the coaxial cable between the LNBF on the second dish and the LNB In port on the DPP 1000.2 LNBF. Refer to figure 1 on page 2.

4. From the Point Dish screen (accessed by pressing MENU-6-1-1 on most receivers), run Check Switch again on all connected receivers. On Legacy receiver models 2800, 3900, 4900, and 6000, select the SuperDISH Installation-4Sat option prior to running the Check Switch test. On all other Legacy models, select Test. When the Check Switch procedure finishes, you should see a summary screen similar to one of those shown below.

The DISH Pro/DISH Pro Plus summary screen below is similar to what should be shown for DISH Pro and DISH Pro Plus receivers connected to the DISH 1000.2 when a second dish is connected to the LNB In port. Make sure the summary screen shows reception from the 119°W, 110°W, and 129° satellites and the fourth satellite location on all available satellite tuners. If not, re-peak the DISH 1000.2 or the second dish as needed to achieve the required signal levels. Confirm the installed LNBF on the second dish is correctly identified.

The Legacy summary screen below is similar to what should be shown for Legacy receiver models 2800, 3900, 4900 or 6000 connected to the DISH 1000.2 when a second dish is connected to the LNB In port. Make sure the summary screen shows reception from 110°W, 119°W, 129° satellites and the fourth satellite location on all available satellite tuners. Note that these receivers identify the DISH 1000.2 as SW21 4-Sat in this configuration, which is OK.

Note: Legacy receiver models 1000, 2000, 3000, 4000, 5000, 7100, 7200 and JVC-DVHS (IRR) may not detect and will not support signals from DISH Network bandstacked FSS LNBFs or 129°, and will not support a fourth satellite location connected to the LNB In port.
Connecting to a Switch

Connecting the DPP 1000.2 LNBF to a DPP44 Switch

The DPP 1000.2 LNBF can be connected to provide 119°W, 110°W and 129°W satellite signals to a DISH Pro Plus 44 switch. Refer to the instructions provided with the switch for additional considerations and instructions. Signal for a fourth satellite location must be provided directly from the fourth satellite location’s LNBF to the DPP switch. The **LNB In** port on the DPP 1000.2 LNBF must not be connected. In this installation, the DPP 1000.2 LNBF defaults to the following settings:

- **Port 1** - 119°W
- **Port 2** - 110°W
- **Port 3** - 129°W
- **LNB In** - Disabled when DPP 1000.2 LNBF is connected to a switch. When connected to a switch, any LNBF connected to the **LNB In** port must be disconnected from the DPP 1000.2 LNBF and connected directly to the switch.

**Note:** The DPP 1000.2 LNBF is NOT compatible with DISH Pro switches in any installation.

Connecting three DP Dual (or DP Single) LNBFs to a Switch when using the Three-LNBF Bracket

When using the Three-LNBF Bracket on the DISH 1000.2 with three DP Dual (or DP Single) LNBFs, the LNBFs must be connected to a switch to provide 119°W, 110°W and 129°W to the installed receivers. Follow the LNBF and switch installation instructions for additional considerations.

**Note:** Legacy LNBFs and switches can be used with the Three-LNBF Bracket. Follow all instructions for that equipment if you choose to use Legacy LNBFs and switches.
Use the tables below as follows:

1. Find the ZIP code for your location.
2. Find the row that contains the ZIP code or the first three digits of the ZIP code. For example, the correct row for ZIP code 80112 is 801XX.
3. Write down the number in the AZ column in the “Azimuth” blank on page 3.
4. Write down the number in the EL column in the “Elevation” blank on page 3.
5. Write down the number in the SK column in the “Skew” blank on page 3.

Radio Interference

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

1. this device may not cause harmful interference, and
2. this device must accept any interference received, including interference that may cause undesired operation.

Modifying this receiver may void your authority to use the equipment. This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

• Reorient or relocate the receiving antenna.
• Increase the separation between the equipment and receiver.
• Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
• Consult the dealer or an experienced radio/TV technician for help.

If none of the remedies stops the radio interference, you should contact a licensed radio/television technician, your satellite dealer or call the Customer Service Center at 1-800-333-3474, for assistance.
